Directory of Forest and Conservation Tree Nurseries in the United States

1994 Edition

Acknowledgements

It is only through the help and commitment of many others that this national directory has been made possible. The authors greatly appreciate the cooperation and significant contribution provided to the project by all nurseries listed in this revised edition. Special thanks are extended to State Foresters and their staffs for the assistance they provided with data collection.

The authors gratefully acknowledge the substantial contributions made by Forest Service Regional Nursery Specialists, Thomas D. Landis, Clark W. Lantz, and Ronald P. Overton, who willingly provided their personal assistance, consultation, and review.

A special note of gratitude and acknowledgement is extended to Aleta C. Barthell for her outstanding contribution and tireless efforts toward collecting data, designing, editing and preparing this document for publication. Recognition is also given to Gail Saunders-Boyle for her contribution to the cover and publishing advice.

Finally, the authors thank Robert D. Mangold, National Program Leader for Nurseries and Tree Improvement, for the support, technical advice, and patience he provided throughout this project.

*Debra J. Okholm
Raymond D. Abriel*

The policy of the United States Department of Agriculture Forest Service prohibits discrimination on the basis of race, color, national origin, age, religion, sex, or disability, familial status, or political affiliation. Persons believing they have been discriminated against in any Forest Service related activity should write to: Chief, Forest Service, USDA, PO Box 96090-6090, Washington, DC 20090-6090.

Introduction

We are pleased to offer an updated *Directory of Forest and Conservation Tree Nurseries in the United States*¹ for your use. The USDA Forest Service has been active in providing assistance to promote successful tree planting, regardless of landownership. As a vital part of that effort, this directory was developed to facilitate the work of those engaged in reforestation and conservation forestry activities. Data was collected in an effort to develop, as much as possible, a comprehensive listing of nurseries from which forest and conservation tree seedlings may be ordered.

The last directory dates back to 1987. Since that time many changes have occurred, including the closing and opening of both public and private nurseries. With the increased focus on using ecological approaches in natural resource management, there has been a tremendous upsurge in the propagation of hardwood trees, native shrubs, and other species of plants important in ecological restoration and watershed activities. Recognizing the vital role that nurseries play in preserving and increasing biological diversity, we have expanded the scope of the directory to include conservation species in addition to the more traditional commercial tree species used for reforestation. For the purposes of this publication, we are defining "conservation trees" as:

Trees planted to enhance biodiversity, increase wildlife habitat, conserve soil, reclaim or restore disturbed areas, maintain or improve water quality, protect livestock, or establish farmstead windbreaks and living snow fences.

It is hoped that the directory will serve as a mechanism for improved communication between nursery staff, resource managers, and landowners; thereby, facilitating good stewardship on all lands.

¹Formerly published as the *Directory of Forest Tree Nurseries in the United States* by The American Association of Nurserymen in 1987.

For Planting Success.....

Appropriate Seed Source

To achieve planting success, the reader must remember that trees are adapted to their local environments. Thus, the choice of seed source is a critical component when ordering reforestation stock. Planting seedlings that are inappropriate for the locality or elevation of your planting site can be risky and may result in increased vulnerability to insects and disease, poor growth form and vigor, and even mortality. We recommend that you obtain planting advice from local resource management professionals, and then work with the nursery staff to make sure the seed that is used is appropriate for your site. Remember—one size does not fit all!

Shipping and Storing

In order to minimize the exposure of seedlings to unfavorable environmental conditions, make certain that shipping and storing of seedlings are done with caution. Incremental stresses, such as exposure to heat or wind, are additive, and take their toll on seedling survival once they are planted.

Arrange for cold storage if you don't plan to plant the seedlings immediately upon receipt. If you are picking up seedlings from the nursery, make sure that they are covered with a tarp or protected from the wind and the sun. These small precautions will help to guard against reduced growth and survival of your planted seedling stock.

A local nursery, close to the planting site, may be the best choice, provided seedlings from the proper seed source are available. Seedlings could be picked up daily from the nursery, reducing the time in field storage. Travel time to the planting site would be reduced, resulting in fresher seedlings at planting time. Seedlings could be picked up early in the morning and planted while temperatures and moisture stress are low. Good communications could be established more readily between the planting contractor and the nursery personnel, resulting in a better working relationship between both groups.

Native Species

Local native plant species have an intrinsic value as a component of forest ecosystems. Non-native plant species, although useful for specific purposes, have the potential to displace natural plant and animal communities, either through aggressive competition, or through disease and insect introductions. We recommend the use of local native plant species whenever possible.

Assistance

For professional assistance, contact your nearest state forester, county extension agent, Soil Conservation Service office, Soil and Water Conservation District, or private forestry consultant.

If you have further questions, contact one of the following people from the USDA Forest Service:

Northeastern States

Ron Overton, St. Paul, MN
Tel: (612) 649-5241

Southeastern States

Clark Lantz, Atlanta, GA
Tel: (404) 347-3554

Western States

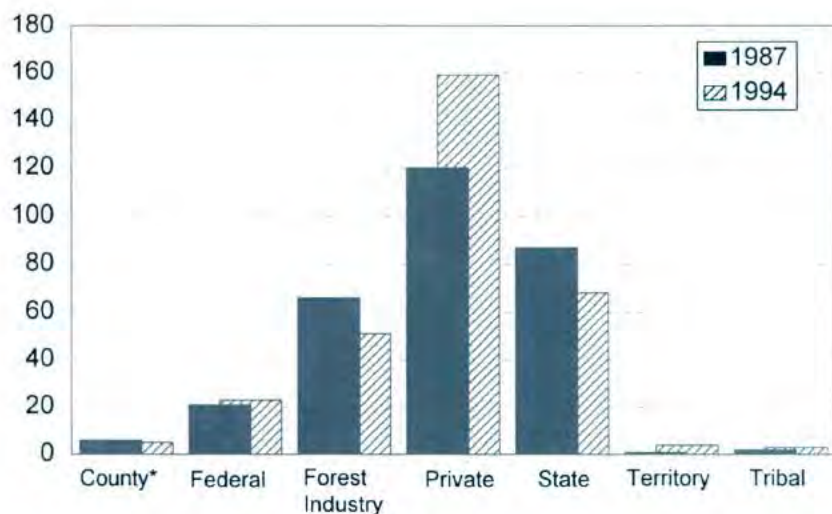

Tom Landis, Portland, OR
Tel: (503) 326-6231

National Office

Robert Mangold, Washington, DC
Tel: (202) 205-1379

Figure 1.

Ownership breakdown of forest and conservation tree nurseries in the United States in 1987 and 1994.

Note!

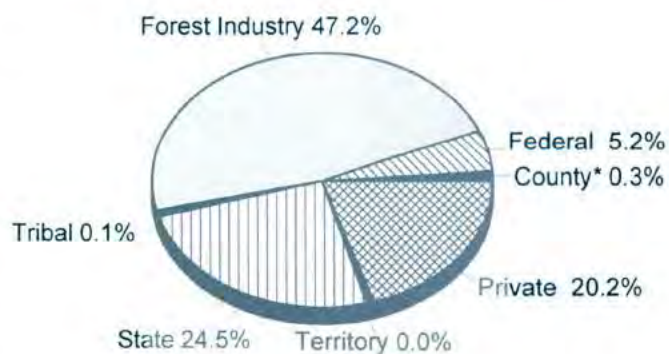

The information presented in this directory reflects only the data submitted by forest and conservation tree nurseries that chose to participate in our survey.

Ownership Category	Number of Nurseries		Percent of Total	
	1987	1994	1987	1994
County*	6	5	2.0%	1.6%
Federal	21	23	6.9%	7.3%
Forest Industry	66	51	21.8%	16.3%
Private	120	159	39.6%	50.8%
State	87	68	28.7%	21.7%
Territory	1	4	0.3%	1.3%
Tribal	2	3	0.7%	1.0%
Total	303	313	100.0%	100.0%

Figure 2.

Total tree seedlings distributed by forest and conservation tree nurseries in the United States during the 1992-1993 season.

Ownership Category	Thousands of Seedlings	Percent of Total
County*	5,974,000	0.3%
Federal	95,184,000	5.2%
Forest Industry	860,204,000	47.2%
Private	367,783,000	20.2%
State	447,412,000	24.5%
Territory	420,700	0.0%
Tribal	2,380,000	0.1%
Total	1,779,357,700	100.0%

* Includes: County and Conservation Districts

Definitions

92-93 Distribution:

- ♦The number of tree seedlings actually produced and distributed by nurseries during the Fall 92/Spring 93 season.

Potential Seedling Distribution:

- ♦The number of tree seedlings the nursery is capable of producing and distributing.
